

Hanwell's RHT Datalogger; Your delivery's secret diary – revealed!

Day 1 – Dispatched from your gallery. Destination: loan site.

Day 2 – Exposed to unacceptable temperatures for long periods of time

Day 3 – Arrives at destination in poor condition

Day 4 – Complaints coming in and complaints going out to delivery service with no resolution as no evidence can be provided to prove mistreatment or that the valuable objects were not in poor condition from dispatch.

Where do you go from here? Begin the process again with crossed fingers and emptier pockets?

There is a way to track your deliveries condition from start to finish; Hanwell's RHT Datalogger.

Hanwell Instruments specialise in environmental monitoring and control devices and have recently launched the new RHT Datalogger. This is an innovative affordable environmental recorder; it accompanies your items whilst in transit, storage or on display within a museum or gallery. It records the environment of your valuable objects documenting temperature and humidity continuously along its way.

Collected data can be easily analysed in graphical or

tabular form. Reporting tools deliver key environmental parameters for complete documentation of the shipping and handling process.

Benefits:

- Reduces product damage and loss during shipping handling and storage
- Provides ongoing record of unacceptable exposure, including precise time and date
- Encourages adherence to storage and handling temperature requirements
- Ensures chain of accountability in storage and transportation
- Identifies potential quality problems before delivery to potential loan site
- Protects against/reduces warranty claims.
- Pinpoints trouble spots in storage and transportation
- Monitors valuable objects on display within a museum or gallery

Now that you can pinpoint precisely where and when the damage occurred, you'll be in a much better position to ensure this doesn't happen again, whilst minimising restoration costs and safeguarding our heritage.
